

# **CONDOR** PHOENIX Audio Technologies

**Looking to optimize your collaboration space?  
Tired of tangle wires and devices getting in the way?**

Does your conference table look like this?

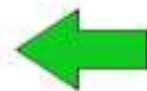

**The perfect audio solution  
has finally arrived!**

**The Condor will completely change the  
look and dynamics of your conference room!**

With the Condor, your  
collaboration space can be  
clean and clutter-free.

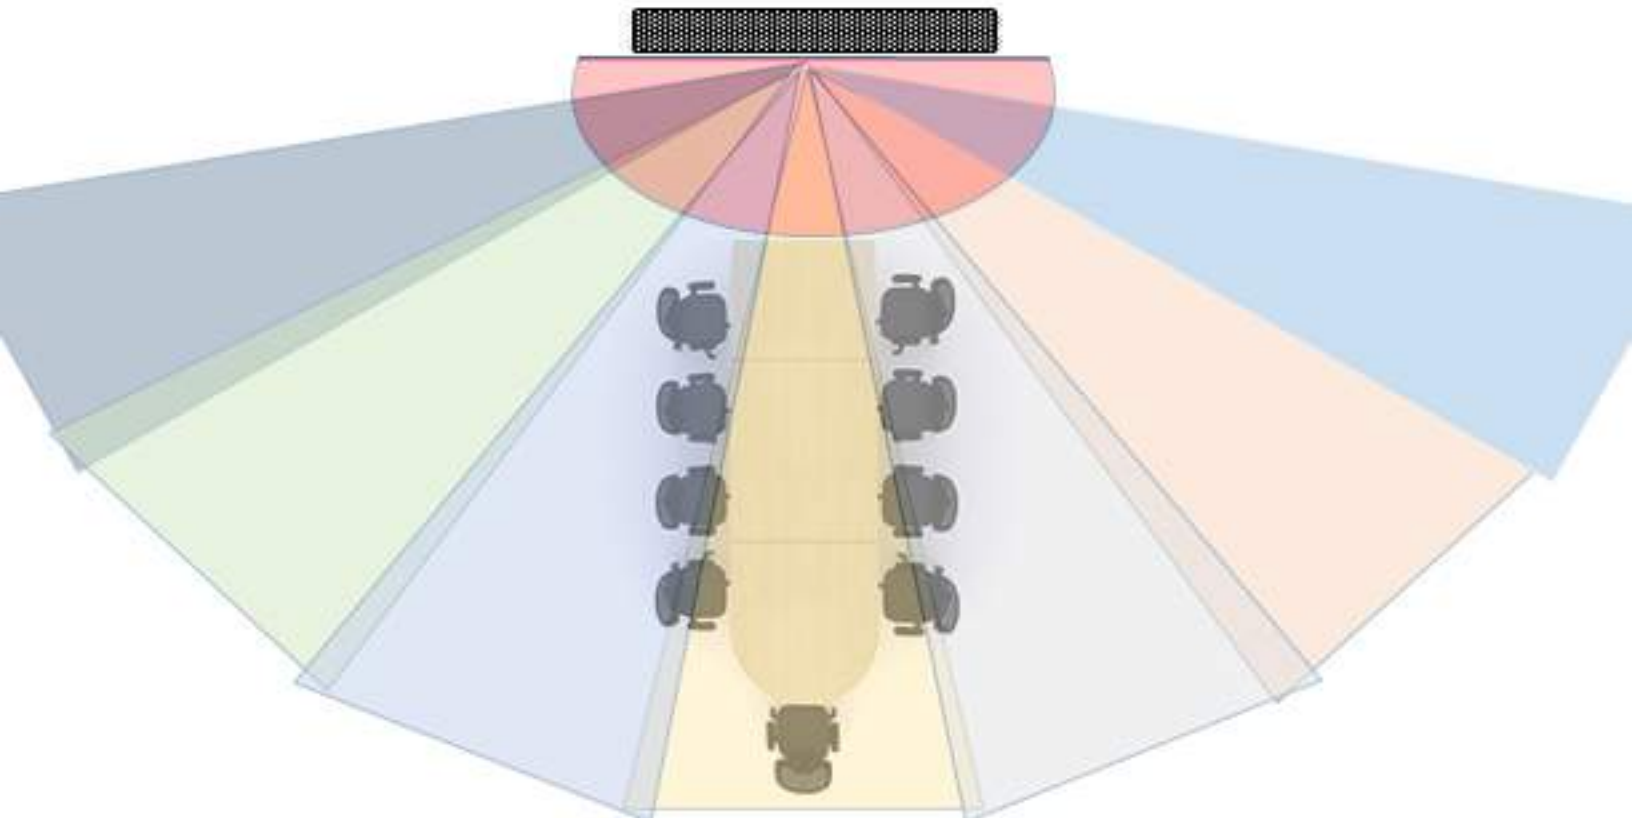

## Overview

The Condor is a 48-inch wide multi-microphone array with a pickup range of up to thirty feet. It includes a built-in SIP phone, which can be controlled using a dedicated application that runs on your smart device.

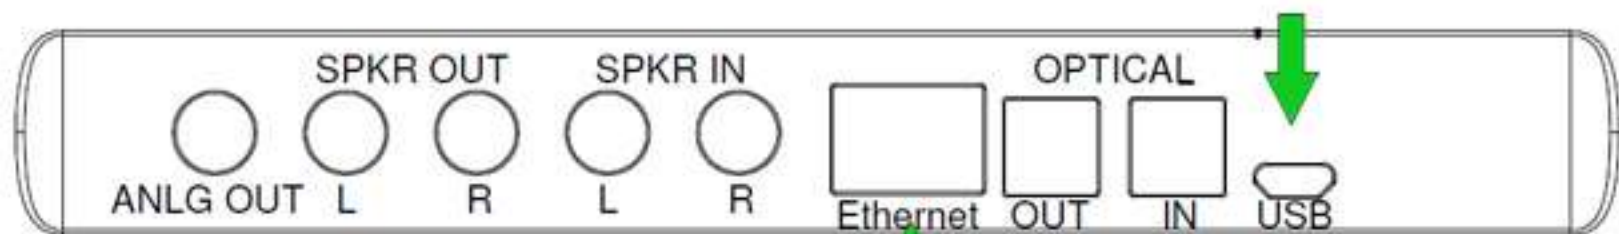

## The Technology

The Condor deploys multiple directional audio beams, covering the entire room. An additional short range beam picks up those standing close to the array. The Condor can easily connect to any video conferencing system, and use any type of speakers, including external sound bars or your monitor's internal speakers. It is DSP-based with a full suite of algorithms that operate on each of the beams, including echo and noise cancellation.

## Connecting the Condor

**Power** - The Condor is powered through its USB connector, either from a PC or a 5V power AC/DC adaptor

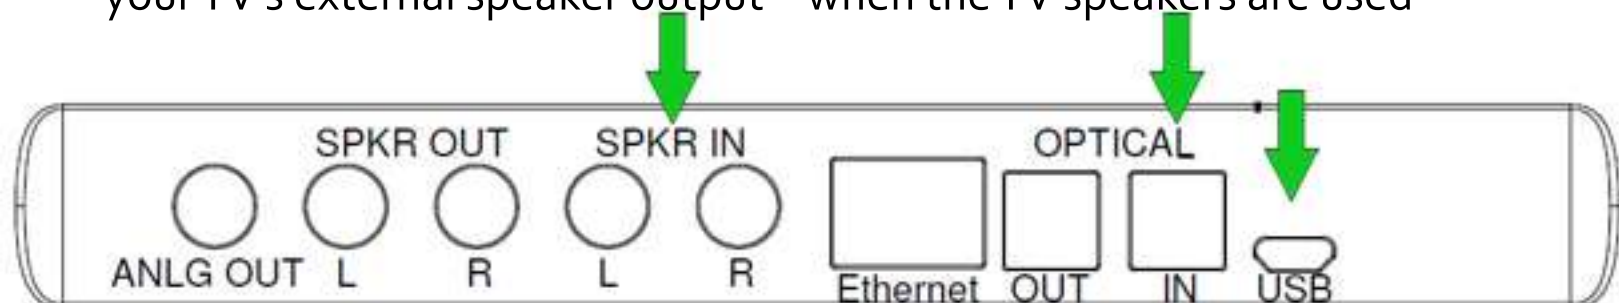

**Network** - The Condor connects to your local network, for control and setup purposes, but also for your SIP phone operations, through the RJ45 Ethernet connector

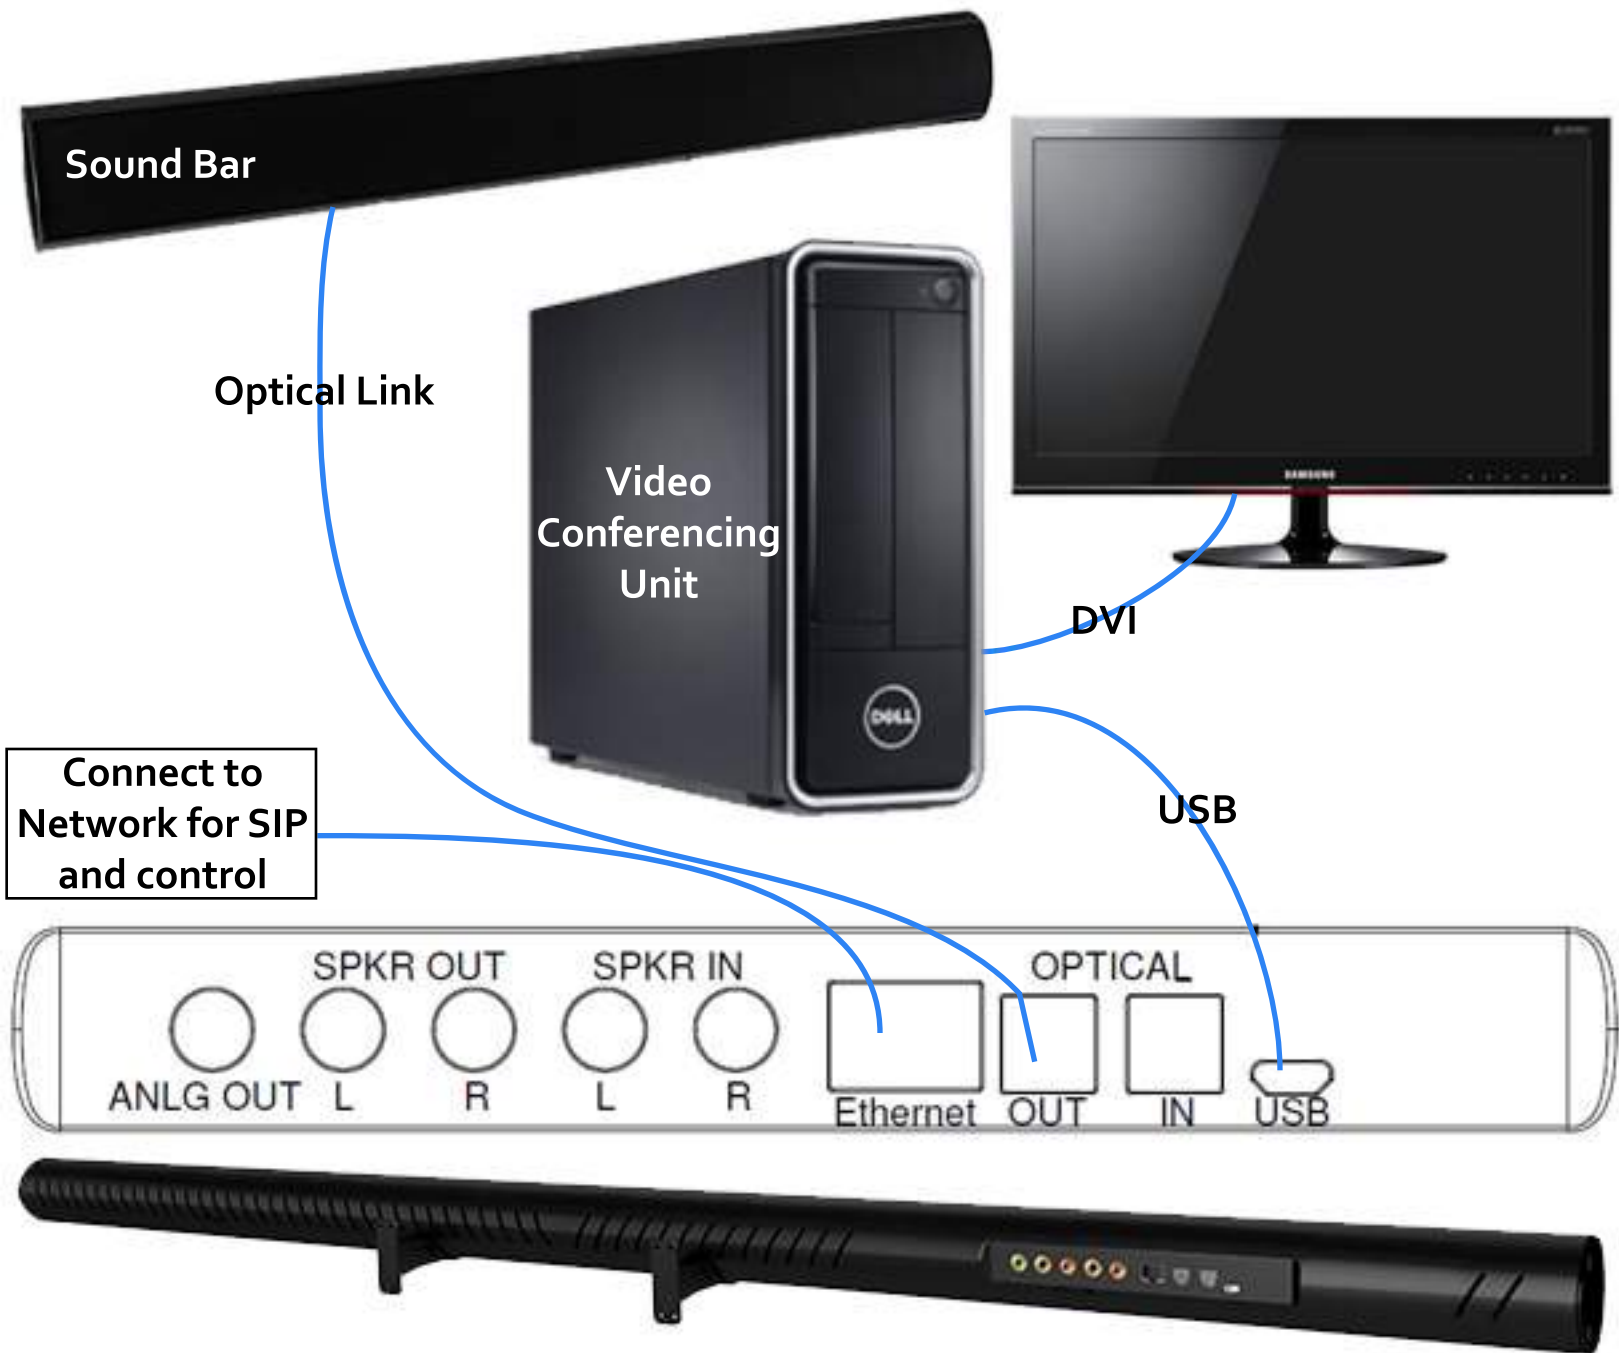

**Speaker Input** - In order for the echo cancelling to work, the Condor has to receive the loudspeaker signal as an input.

The Condor supports a number of alternative input connections:

- USB link – for PC based conferencing application
- Analog input – for analog video codecs
- Optical link from the communication box (cable box or similar) or from your TV's external speaker output – when the TV speakers are used

## Typical Installation

**The Condor is a revolution in the future of video conferencing.**

**It is sleek and rugged, made out of strong aluminum, yet non-intrusive.**

**Simple to install and easy to use.**

**Just sit back, relax, and let the Condor do all the work.**
